

MOBI® MIDGET

The Mobi® Midget RODI trolley system is a three-stage filtration system that incorporates three distinct purification technologies: a carbon block pre-filter, a reverse osmosis membrane, and a polishing DI filter. The result of the three filtration procedures is clean water with a purity level of 000ppm. This unit is designed to supply a single operator.

This excellent stainless-steel mobile trolley system can filter tap water on-demand while on-site. You are able to produce a strong flow of pure water quality using a battery powered RODI trolley system.

The MOBI® Midget trolley system can be used in courtyards, around schools, retail malls, and other situations where a van or trailer system cannot go. With the use of a short lightweight carbon fibre OVA8® pole, the trolley systems can also be mounted on rooftops for abseiling or suspended platform-based cleaning.
